

## DESCRIPTION

Primate dietary multiple vitamins is a Constant Nutrition™ diet formulated to provide for the normal daily vitamin needs of most non-human primates. Convenient sized tablets, highly palatable and made with stable forms of fat and water soluble vitamins. Each tablet has a uniform size and precision weight of 3 grams.

### Features and Benefits

- Provides supplementary vitamins which eliminates need to feed fresh fruits and vegetables for nutritional supplementation
- Convenient, feed and vitamin tablets from same supplier
- Convenient size so that animals can easily hold the tablets

### Product Forms Available

- Rolled-edge rectangular-shaped tablet, 10 mm (3/8") x 13 mm (1/2") x 22 mm (7/8") length
- Each tablet weighs 3 grams

## INGREDIENTS

Vitamin A acetate, cholecalciferol (source of vitamin D<sub>3</sub>), dl-alpha tocopheryl acetate (source of vitamin E), menadione sodium bisulfite complex (source of vitamin K), ascorbic acid, thiamin mononitrate, riboflavin, nicotinic acid, pyridoxine hydrochloride, calcium pantothenate, folic acid, biotin, cyanocobalamin (source of vitamin B<sub>12</sub>), maltodextrin, dried corn syrup, modified starch, fructose, magnesium stearate and natural flavors.

## FEEDING DIRECTIONS

Provide as a dietary source of vitamins to rapidly growing and adult animals deemed in need of such supplemental vitamins. For best results, feed daily with or immediately after meals, amount to feed daily varies with animal size and condition, for example use one tablet daily for 20 to 70 kg animals; an additional tablet for each 70 kg of animal weight. Young animals up to 20 kg need 1/2 of this tablet daily or one tablet every other day.

## CHEMICAL COMPOSITION<sup>1</sup>

Vitamin K (as menadione)	.25 mcg
